Trimble SCS900 Site Controller System—Purchase

The Trimble SC900 system is a breakthrough site measurement and stakeout solution designed specifically for construction contractors.

The Site Controller software, which operates on Trimble's ACU and TSCe™ controllers, uses GPS or total station technology to enable you to measure material volumes, monitor grades and laid material thicknesses, and perform site measurement tasks such as pint, line, and surface stakeout. With this easy-to-use, task oriented system, you no longer need to rely on a contract surveyor for all your site measurement and grade-staking requirements.

SCS900 is designed to simplify your operations, increase your efficiency in the field, and minimize downtime. You can use the system at every stage of construction: site calibration, original ground level checking, stockpile measurement, progress volumes, design stakeout and checking both finished grade and laid material thickness with real-time verification of construction tolerances.

SCS900 controller system has proved to very beneficial to date.

Third Party Accreditation

We have commenced down the road towards a fully audited Environmental, OH&S in addition to our current Quality Assurance Certification with the appointment of a Consultant to work with our company to achieve 5 Star Recognition.
